

Replication programs and data files

The Wind of Change: Maritime Technology, Trade and Economic Development

Luigi Pascali (Pompeu Fabra University and University of Warwick)

CONTENTS OF THE REPLICATION MATERIAL PACKAGE

Description of the data (in the directory “PUBLIC DATA”)

A. BILATERAL_DISTANCES_PUBLIC.dta

It contains data on bilateral distances across countries by sail and steam technologies.

B. BILATERAL_TRADE_PUBLIC.dta

It contains data on bilateral trade.

C. CLIWOC_PUBLIC.dta

It contains data on duration of voyages of sailing ships from 1750-1854.

The original source of data is the following website:

<http://projects.knmi.nl/cliwoc/>

Please cite:

García-Herrera R, Können GP, Wheeler DA, Prieto MR, Jones PD, Koek FB. 2005. CLIWOC: A Climatological Database for the World's Oceans 1750–1854. *Climatic Change* **73**: 1–12.

D. COUNTRY_LEVEL_PUBLIC.dta

It contains country level data on per-capita GDP, population, exports, imports, urban population.

E. FREIGHT_RATES_PUBLIC.dta

It contains data on freight rates for shipping metals and coal from the ports of Cardiff and Newcastle.

Description of the do-files (in the directory “DO_FILES”)

A. Do_file_bilateral_results_20170313

This do-file generates all the descriptive statistics, regressions results, and scatter plot associated with the country-pair analysis:

Table 1 (Panels A, B and C), Tables 2-4, Table A.2, Table A.4, Figure A.3

B. Do_file_country_level_results_20170315

This do-file generates all the descriptive statistics, regressions results, and scatter plot associated with the country-level analysis:

Table 1 (Panels D and E), Tables 6-10, Table A.3, Tables A.7-A.10, Figures A.5-A.10

This do-file also produces an excel file named “Data_for_Figure10.xls”, which is used to create Figure 10 in ArcGis.

Description of the ado-files (in the directory “ADO_FILES”)

A. cgmreg.ado

It allows the estimation of multi-clustered standard errors using the methodology of Cameron, Gelbach, and Miller (2011). In all specifications (both at the ethnic-country level and at the pixel-level) we cluster standard errors at the country-level and at the ethno-linguistic family level. Please cite:

“Robust inference with Multi-Way Clustering,” *Journal of Business and Economic Statistics*, April 2011, 29 (2): 238-249.

The .ado file is available also from Doug Miller’s web-site at UC Davis.

(<http://www.econ.ucdavis.edu/faculty/dlmiller/statafiles/>)

B. Esta package

It is used to produce latex tables from regression results.

This package is available also from Dustin Tingley’s web-site at Harvard.

(<http://scholar.harvard.edu/sites/scholar.iq.harvard.edu/files/file.zip>)

INSTRUCTIONS

- 1) Open the do-files contained in the directory DO_FILES in Stata 14.
- 2) Substitute the path of the replication material in line 6 in each do-file.
- 3) Run the do-file Do_file_bilateral_results_20170313.do
- 4) Run the do-file Do_file_country_level_results_20170315.do
